MOLECULE TYPE: genomic DNA
DESCRIPTION: prealbumin gene exon 4 (accession
DESCRIPTION: M15517) nucleotides 166 to 180
HYPOTHETICAL: no

Sequence 2248, Application US/08585684B

Patent No. 587021

GENERAL INFORMATION:

APPLICANT: Stinchcomb, Daniel T.

APPLICANT: Stinchcomb, James

TITLE OF INVENTION: METHOD AND REAGENT FOR THE

TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE

TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES

NUMBER OF SEQUENCES: 2751

CORRESPONDENCE ADDRESS:

ADDRESSE: Lyon & Lyon

STREET: 631 West Fifth Street

STREET: Los Angeles

STREET: California

COUNTRY: U.S.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDIUM TYPE: storage

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/757,024
FILING DATE: 26-NOV-1996
CLASSIFICATION: 514
ATTORNEY/AGENT INFORMATION:
NAME: Sibley, Kenneth D.
REGISTRATION NUMBER: 31,665
REFERENCE/DOCKET UNBER: 31,665
REFERENCE/DOCKET UNBER: 31,665
REFERENCE/DOCKET UNBER: 31,665
RELEFAX: 919-881-3140
TELEFAX: 919-881-3140
TELEFAX: 5751.02
INFORMATION FOR SEQ ID NO: 498:
SEQUENCE CHARACTERISTICS:
LENGTH: 15 base pairs
TYPE: nucleic acid
STRANBEDNESS: single

| Sequence 846, Application US/09038073
| Patent No. 6194150
| GENERAL INFORMATION:
| APPLICANT: Stinchcomb, Daniel T. APPLICANT: Stinchcomb, Daniel T. APPLICANT: Marvis, Thale
| APPLICANT: Marvis, Thale
| TITLE OF INVENTION: METHOD AND REAGENT FOR THE
| TITLE OF INVENTION: NDUCTION OF GRAFT TOLERANCE
| TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES
| NUMBER OF SEQUENCES: 2751
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: Lyon & Lyon
| STREET: Suite 4700 Indels STATE: C.C.
COUNTRY: U.S.A.
ZIF: 90071
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
MEDIUM TYPE: Graage
COMPUTER: IBM Compatible
OPERATING SYSTEM: IBM P.C. DOS 5.0
SOFTWARE: FeatsEQ Version 1.5
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/038,073
FILING DATE:
PRIOR APPLICATION DATA:
APPLICATION NUMBER: 08/58,684
FILING DATE:
ATONNEY/AGENT INFORMATION:
NAME: Warburg, Richard
REGISTRATION NUMBER: 32,327
REFERENCE/DOCKET NUMBER: 218/078
TELECOMMUNICATION INPORMATION:
TELEPHONE: (213) 955-0440

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 6, Application US/09415785A
Patent No. 6426196
GENERAL INFORMATION:
APPLICANT: Dubensky Jr., Thomas W.
Relli, Barbara A.
Schlesinger, Sondra
Dryga, Sergey A.
TITLE OF INVENTION: RECOMBINANT ALPHAVIRUS-BASED VECTORS
WITH REDUCED INHIBITION OF CELLULAR MACRO-MOLECULAR
SYNTHESIS
TITLE OF INVENTION: RECOMBINANT ALPHAVIRUS-BASED VECTORS
WITH REDUCED INHIBITION OF CELLULAR MACRO-MOLECULAR
SYNTHESIS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 698

US-09-322-409-134

US-09-322-409

Sequence 134, Application US/09322409

Patent No. 6471957

GENERAL INFORMATION:

APPLICANT: Yang, Shumin

APPLICANT: Wonderling, Ramani S.

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

FILE REFRENCE: IN-2-CI

CURRENT APPLICATION NUMBER: US/09/322, 409

CURRENT PILING DATE: 1999-05-28

CURRENT FILING DATE: 1999-05-28

MUNBER OF SEQ ID NOS: 154

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 134

LENGTH: 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

US-09-479-005A-259/c

US-09-479-005A-259/c

Sequence 259, Application US/09479005A

Patent No. 6656731

GENERAL INFORMATION:

APPLICANT: RIDOZYME Pharmaceuticals, Inc.

TITLE OF INVENTION: Nucleic Acid Catalysts with Endonuclease Activity

FILE REFERENCE: MEHBOO-884-C

CURRENT APPLICATION NUMBER: US/09/479,005A

CURRENT FILING DATE: 200-01-07

PRIOR APPLICATION NUMBER: US 09/444,209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER: IEM PC compatible

Patent No: 5631237
GENERAL INPORMATION:
APPLICANT: Dzau, Victor J
APPLICANT: Kaneda, Ysasufumi
TITLE OF INVENTION: METHOD FOR IN VIVO DELIVERY OF
TITLE OF INVENTION: THERAPEUTIC AGENTS VIA LIPOSOMES
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GENERAL INFORMATION:

US-08-110-294A-6

Sequence 6, Application US/08110294A

Patent No. 5821234

GENERAL INFORMATION:

APPLICANT: Dazau, Victor J

TITLE OF INVENTION: Inhibition of Proliferation of Vascular TITLE OF INVENTION: Smooth Muscle Cell

NUMBER OF SEQUENCES:

ADDRESSEE: Allegretti & Witcoff, Ltd.

STREET: 10 South Wacker Dr.

CITY: Chicago
STATE: 1L

COUNTY: USA

ZIP: 66666

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: IBM PC Compatible

COMPUTER: IBM PC Compatible

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 739

US-08-110-294A-7/c

I Sequence 7, Application US/08110294A

F Patent No. 5821234

GENERAL INFORMATION:

APPLICANT: Dzau, Victor J

TITLE OF INVENTION: Inhibition of Proliferation of Vascular TITLE OF INVENTION: Smooth Muscle Cell

NUMBER OF SEQUENCES: 49

CORRESPONDENCE ADDRESS:

ADDRESSES: Allegerettic Witcoff, Ltd.

STREET: 10 South Wacker Dr.

CITY: Chicago
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

CELEFRA: (attorney) (212) 246-8959
INFORMATION FOR SEQ ID NO: 277:
ERGURT: 15 base pairs
TYPE: nucleic acid
STRANDEDNES: double stranded
TOPOLOGY: Linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: les rRNA gene from Alcaligenes
DESCRIPTION: nucleotides 1169 to 1183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chromobacterium, Eikenella,
Kingella, Neisseria, Simonsiella and
Vitreoscilla species comprise a major branch of
the beta group Proteobacteria by 16S rRNA
sequence comparison
International Journal of Systematic

Stinchcomb, Daniel T.

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Daniel T.
APPLICANT: Jarvis, Thale
APPLICANT: McSwiggen, James
TITLE OF INVENTION: METHOD AND RE
TITLE OF INVENTION: INDUCTION OF
TITLE OF INVENTION: AND REVERSAL
NUMBER OF SEQUENCES: 2751
CORRESPONDENCE ADDRESS:
ADDRESSE: Lyon & Lyon
STREET: 633 West Fifth Street

METHOD AND REAGENT FOR THE INDUCTION OF GRAFT TOLERANCE AND REVERSAL OF IMMUNE RESPONSES 2751
